

# Who makes up a **RED TEAM**

CORE  
SECURITY

## How many people are on a team?

*A Red Team can be made up of as many as two people and can scale to over twenty, depending on the task.*

*Find experienced, critical thinkers to form the core of your team and continue building it with a diverse mix of skill*

## Who should be included?

*Ideally, a Red Team should be formed with these members:*

Ideally, your Red Team will have members representing administrative and/or management skills across all of your technologies.

A few years of experience is needed to know how to build and administer networks so that they know how these networks run and where shortcuts and mistakes are likely.

Some of the best Red Team members we have seen have come from IT admin ranks, have experience in network engineering or have been a part of Windows and Unix administration.

## What's the key?

The key to building your team will be to make sure you are choosing people who best understand all aspects of your technology stack.
